

A prominent market participant

Multiconsult is one of Norway's largest providers of professional consulting engineering services, with around 1500 employees and an annual turnover of nearly 2 billion NOK.

Years of experience

Multiconsult has been an important operator in this sector for more than 100 years, and has taken charge of many large-scale national projects. This role was essential in expanding our range of experience in all relevant fields and specialisations.

Relevant competence

Multiconsult recruits from the most qualified experts. Combined with excellent management and integrated oversight routines, this provides us with the resources we need to take full responsibility for highly complex and challenging projects.

Areas of business

Our activities are focused on six different areas of commitment:

- Building, Construction & Property
- Industry
- Oil & Gas
- Transport & Communications and Infrastructures
- Energy
- Environment and Natural Resources

Engineering management

”Multiconsult aims to be best in Norway at managing and overseeing multi-disciplinary engineering projects”

Multiconsult is one of Norway’s largest consulting engineering companies. The market expects us to excel at managing multidisciplinary engineering projects, and to have the expertise necessary to lead such projects to successful completion.

We take these expectations seriously.

We are not humble. We are proud to say that Multiconsult will be the best engineering company in Norway when it comes to management and oversight control of multi-disciplinary engineering projects. This is our commitment.

In addition to our highly professional staff and renowned experts in all branches of engineering, we have highly qualified leaders running our project management division. These experts cultivate management and project oversight as a profession, and they know how Multiconsult works from the inside.

This combination allows us to provide customers with a winning and unified team that works continuously to maintain a high level of quality, and to improve productivity.

Multiconsult is playing a vital role in this sector:

- We aim to assist in the development and growth of the engineering sector, and to improve its reputation.
- We participate in professional arenas to address questions regarding management and project oversight.
- We want to help our customers by learning to understand their goals, needs and expectations.
- To develop more flexible and structured project execution, and we aim to cooperate with clients, owners, builders, contractors, architects and other consultants and advisors.
- We take the lead in supporting innovative projects in our trade.
- We want to contribute to sustainable development by focusing on environmental issues during project planning.

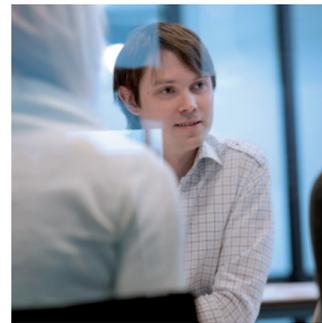

leadership

and oversight

Experience

Carrying extensive and complex projects to a successful completion requires an understanding of the challenges that relates to management, oversight/control and technical issues. From innumerable large-scale projects in all our areas of business, Multiconsult has been harvesting experience for more than 100 years. This allows us to combine best practice from many kinds of projects and implement these in our organization.

Careers

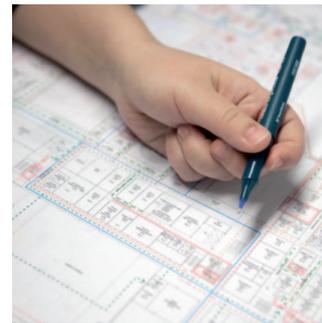

There is a shortage of talented project managers in our trade. Offered training is limited, and it is time consuming to develop and train good project managers and team leaders.

At Multiconsult we are proactive, trying to identify and support budding talent in the field of project planning, management and oversight. We cultivate this as a profession in itself, defining it as a specific career opportunity. These professions are recognised within our organization, and supported by our in-house development programme (PROLUP).

Prioritised

In Multiconsult we have set up our own centralised unit to organize management and oversight work on large multidisciplinary projects. This unit has become our centre of expertise for professional project planners, managers and oversight personnel, challenging and inspiring them in bringing projects to a successful completion.

Predictable execution

Our customers need to know that Multiconsult will lead their projects in a predictable and professional manner – each and every time. That is why we are working continuously to improve on these practices, and implement our best practice standards for project execution.

We document these best practice standards through our Execution Model. Developed to describe work processes, decision-making procedures, project delivery tasks, it also manages interaction with customers and other operators in any phase of a project.

This way, we can ensure predictability and excellent quality in all our projects.
